

2016 Catalog

MVP Disc Sports debuted in 2010 with the mission of growing disc golf by producing high-tech premium discs. Utilizing patent-pending GYRO™ Technology, groundbreaking Fission™ Microbubble Technology, advanced polymer technologies, and state-of-the-art manufacturing and distribution processes, MVP has established itself as the Leader of Disc Golf Technology. Our industry-leading quality and innovation have propelled MVP to the highest ranks of disc golf brands.

We invite you to explore this introduction to our company, products, and processes to see how we've applied our high standards to all aspects of the disc golf industry.

If you have any questions we invite you to contact us at sales@mvpdiscsports.com or to call 844-MVP-DISC (844-687-3472).

Sincerely,
The MVP Disc Sports Team

Neutron

MVP and Axiom both feature our flagship material, Neutron. An opaque and grippy blend, Neutron is available in the greatest number of models for each brand in a variety of vibrant colors. MVP Neutron features all black GYRO™ rims, and Axiom Neutron features a range of color GYRO™ rims.

Proton

Our original premium disc blend, Proton is a translucent core material with stunning optical clarity, due to the fact that a GYRO™ disc has no weight filler in its bulky core. Proton is durable and grippy just like Neutron, but its candy plastic yields a different aura to each model and especially suits LED-lighted night play (MVP Tri-Lit LEDs available). All MVP Proton will feature a black GYRO™ rim, while Axiom Proton features a vibrant color rim for eye-catching Optic™ effects. Select putters are offered in a special Proton Soft blend as well.

Eclipse

Players wanting a night round or just some highly-visible plastic can choose Eclipse™ Glow, a configuration that pairs a normal Proton core with a white, yet glow-in-the-dark, GYRO™ rim. These are the only regular production non-black rims in the MVP lineup. Eclipse is currently exclusive to MVP Disc Sports. There is truly no other glow disc like Eclipse™, as its glowing outer ring yields less natural camouflage and a more visible shape.

PLASMA

Plasma is a specialty premium blend, known for its unique visual appeal with metallic and color-shift options, as well as its superb semi-gummy grip. Few premium materials grip this well, and none other look as cool. We have specially engineered some Plasma drivers for additional glide and a softened stability.

FISSION™

MICROBUBBLE TECHNOLOGY

Fission is our breakthrough lightweight material. Fission™ Microbubble Technology can be used to create an exceptionally stable ultralight disc, or to increase the GYRO™ effect in a medium weight disc. Fission™ is opaque with a matte finish. Despite any comparisons, Fission™ is in a class by itself as the only lightweight/bubble plastic to ever address weight distribution. Sellers and throwers are constantly amazed that Fission™ exceeds the low expectations set by single-piece lightweight discs.

Electron

plastic

MVP's focus on premium materials led many fans to believe we would not produce a "baseline" plastic. We strove to reinvent "baseline" with our innovative Electron plastic. This ultra-grippy all weather material will wear its battle scars with pride and fly straighter with each hit. While retaining the GYRO™ effect for superb line-holding, the gritty feel of Electron produces pinpoint releases and confident putting. Although a premium disc twice-molded with precise blends can hardly be considered "base", Electron is most similar to chalky baseline putter blends on the market. Electron comes in a regular and Soft variant, and is currently exclusive to MVP.

PUTT / APPROACH

Electron
plastic

Electron
SOFT plastic

also available in:

the Science of GYRO™

the EDGE

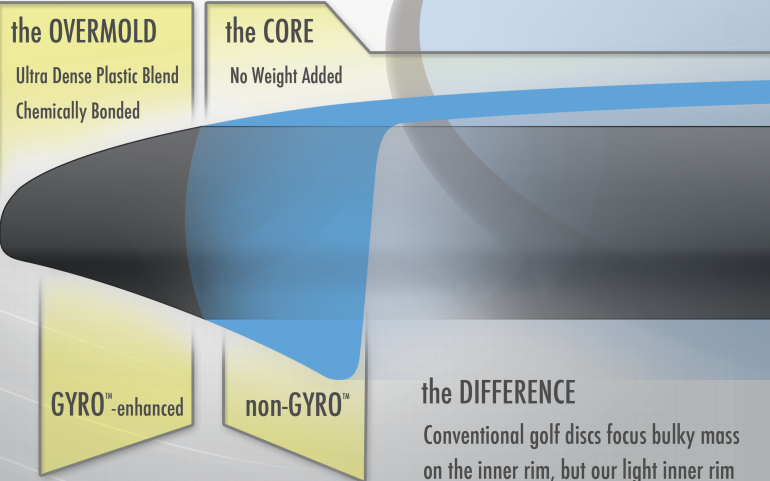

The disc's leading nose tip is narrow, but also furthest away from the center of rotation.

the RIM

The GYRO™ rim adds weight to this outside edge, which then increases rotational inertia.

the ADVANTAGE

With optimized gyroscopic properties, the aerodynamic phases of flight are prolonged, yielding longer lines.

the DIFFERENCE

Conventional golf discs focus bulky mass on the inner rim, but our light inner rim allows that weight to be shifted outward, for unprecedented focus at the outer rim.

GYRO™

Phases of Flight

- GYRO™ Fade
Forward fade at spindown
- Aerodynamic Fade
Disc pulls out of turn as spin decreases
- Aerodynamic Turn
Aerodynamic profile turns disc during the late high-speed phase
- GYRO™ Push
Inertia carries the disc forward during initial high-speed phase

MVP Flight Charts describe the flight of GYRO™ discs with variable lines according to power and direction of spin.

OVERMOLD TECHNOLOGY

23mm rim

21.5mm rim

20mm rim

DISTANCE DRIVERS

The GYRO™ Difference

GYRO™ is about moving mass outward.

The earliest flying discs were highly gyroscopic, with a bulky narrow rim at the edge of a thin plate. As golf discs evolved into a modern triangular rim shape, that gyroscopic potential has diminished as the bulk moves inward.

With a single plastic, the disc's mass is focused on its fat inner rim. A GYRO™ overmolded disc takes weight away from the bulky inner core and rim wall, and slams mass all the way out to the leading edge.

This stabilizes the disc for better line-holding accuracy, helps act against wind disturbance, and retains spin longer in flight for a forward finish.

Direction of Spin

Clockwise and counter-clockwise disc rotations produce opposite side-to-side movements and ending fade.

Clockwise
 RHBH Right-Hand Backhand
 LHFH Left-Hand Forehand

Counter-clockwise
 LHBH Left-Hand Backhand
 RHFH Right-Hand Forehand

This chart only shows Clockwise flights. Consider a mirror image result for most Counter-Clockwise flights.

Energy

Overstable
23mm Distance Driver

The Energy is our fastest and most power- and turn-resistant distance driver. Power throwers will be able to unleash their arms into the wind with confidence given the Energy's speed and overstability. Average to low powered players may not get the same distance potential with Energy as other 23mm or 21.5mm drivers, but Energy can function as a utility disc for skips or overhands when underpowered.

Nitro

Stable-Overstable
23mm Distance Driver

The MVP Nitro is a stable-overstable distance driver from the new high speed 23mm class. Nitro falls in the general stability lineage of Servo, Volt, Tesla, and Photon, with a turn-resistant profile that covers ground and guarantees a fade finish. Average throwers may need lighter weights or headwinds to achieve what little turn is offered by Nitro, while power throwers will find a workable and responsive shallow turn.

Octane

Stable-Understable
23mm Distance Driver

The MVP Octane is a stable-understable distance driver from the new high speed 23mm class. Octane falls in the general stability lineage of Switch, Amp, Inertia, and Wave, with a slight-turn profile that holds long and straight until its fade finish. The 23mm Octane is designed to be relatively less understable than its 21.5mm counterpart Wave. Average throwers should see straight flights with fade, while power throwers will be able to hyzerflip for max distance and tailwind lines.

Catalyst

Understable
23mm Distance Driver

The Catalyst is a perfect starter for big distance. Its stability profile lends itself to being incredibly useful even when underpowered. Catalyst is relatively less understable than its 20mm counterpart, the Orbital. High power throwers will be able to control rollers, sky anhyzers, and tight turns, while average to low power players will get easy distance with great glide, and a power responsive amount of turn-to-straight.

Overstable
21.5mm Distance Driver

Phase

The Phase caps off the acclaimed 21.5mm Distance class. Fans of the Photon, Motion, and Resistor will love the power resistance and wind-fighting characteristics that make the Phase perfect for throwing strong lines in any wind condition, with absolute confidence in its overstable finish. Forehanders, big arms, and those facing a windy line will appreciate what the Phase adds to their arsenal of reliable options.

Neutron

Stable-Overstable
21.5mm Distance Driver

Photon

The Photon is best described as a longer Tesla, with power throwers able to achieve some flight extending turn, and all throwers getting a reliable fade. The Photon is naturally headwind resistant but average power throwers can use a headwind to emulate those extended flights of high power throwers.

Neutron Proton PLASMA
FISSION

Stable-Understable
21.5mm Distance Driver

Wave

The Wave is best described as a longer Inertia, with a stable-understable flight profile and a responsiveness that makes it useful across the power spectrum. Available in weights 175g - 155g, the Wave is the type of driver that players may bag in two or more weights for shot variety. For the most powerful throws, long gliding turnovers and hyzerflip gut shots are possible with the Wave. For average powered throws the Wave will simply extend a variety of lines, from anhyzers to hyzerflips to headwind-assisted turnovers.

Neutron Proton PLASMA

Understable
21.5mm Distance Driver

Orbital

The Orbital is designed as the most understable driver in the acclaimed 21.5mm Distance class. Fans of the Wave, Inertia, and Impulse will find a familiar highly responsive character in the Orbital, as it can be manipulated onto a variety of lines relative to power level and release angles. Smooth throwers and those with modest driver power will maximize straight distance flights best with the Orbital. Power throwers will discover a range of roller, sky turn, and low ceiling finesse lines

Neutron

Motion

Overstable
20mm Distance Driver

The Motion is designed to resist turnover from power or headwind during a long straight travel, followed by a reliable fade. Fans of the Resistor will appreciate the Motion's extended distance with familiar characteristics. While it serves as a utility driver for average-power throwers, high-power throwers will find a trustworthy straight-to-overstable distance workhorse. Forehand throwers will find its overstability especially useful for torque resistance.

Tesla

Stable-Overstable
20mm Distance Driver

The Tesla's responsive design balances a subtle turn and reliable fade, while a pronounced glide and forward finish gain extra distance. The Tesla extends high power or headwind lines and has plenty of bite to fade back reliably and reduce lateral drift. The Tesla can be considered the big brother to our acclaimed Volt fairway driver. Choose the Tesla for long-range pinpoint accuracy.

Inertia

Stable-Understable
20mm Distance Driver

The Inertia is the grand debut of our 20mm-wing distance driver class. This class of controllable distance drivers will all have a wide weight range from 155g to 175g. This allows for an unmatched GYRO™ Push to give throwers increased control in their distance drives. The Inertia's understable profile will allow high power throwers to achieve consistent hyzerflips that will carry far and accurately. Its Neutral flight for low power throwers will allow for reliably straight distance lines with accuracy.

Impulse

Understable
20mm Distance Driver

The Impulse completes our 20mm-wing distance driver class. This class of controllable distance drivers all have a wide weight range from 155g to 175g. This allows for an unmatched GYRO™ Push to give throwers increased control in their distance drives. The Impulse's understable profile will allow high power throwers to achieve controllable hyzerflips that will carry far and accurately. Its Neutral to Understable flight for even low power throwers will allow for reliably straight to turnover distance lines with accuracy.

Overstable 18.5mm Fairway Driver

Shock

The Shock is great for those long fairway lines on windy days. It has very little turn even for both high power throwers and headwinds. It will get the job done when it is too windy for the Volt to be your go to driver.

Stable-Overstable 18.5mm Fairway Driver

Volt

The Volt is geared for long, accurate placement shots. The Volt can hold a long straight line and with a solid, forward penetrating fade. Reach for the Volt when accuracy is needed on long, tight fairways.

PLASMA FISSION

Neutral-Stable 18.5mm Fairway Driver

Amp

The Amp has a controllable turn with substantial glide and a subtle fade. It is excellent for both high and low power players looking for easy, controllable distance with accuracy.

PLASMA

Resistor

Overstable
17mm Fairway Driver

The Resistor is part of a new slower family of fairway drivers with a more controllable speed. The combination of its flat overstable profile and GYRO™ technology allows it to resist turn and experience a strong reliable fade.

Servo

Stable-Overstable
17mm Fairway Driver

The Servo is part of a new class of fairway drivers with a lower power requirement and more controllable speed. Its extended GYRO™ Push yields a straighter lateral movement and immense glide with an effortless forward fade. Both high- and low-power throwers alike will achieve easy pinpoint accuracy with ultimate line control, making the Servo their go-to placement driver in the fairway.

Switch

Stable-Understable
17mm Fairway Driver

The Switch is part of a new class of fairway drivers with a lower power requirement and more controllable speed. Its extended GYRO™ Push and understable profile offers smooth controlled turnovers and a delayed minimal fade. This disc will excel with its ability to cruise for low power throwers. The controlled turnover in conjunction with minimal fade allows for superb accuracy in tight fairways.

Relay

Stable-Understable
16mm Fairway Driver

The Relay features a slim 16mm wing that feels extra chunky in the hand while still being our easiest to grip driver. While advanced and expert throwers will have a healthy flip and turn to carve with, beginner to average disc golfers will get a controllable straight flyer that doesn't need much power. The Relay's low speed demands make it the easiest MVP driver to throw for beginners, and the best all-around "powered-down" disc for experts.

Stable-Overstable

13mm Midrange Driver

Vector

The Vector combines a classic stable-overstable midrange rim with GYRO™ Technology to provide long straight lines with a late and predictable fade. Vector will fight winds with a straight travel and can handle high-powered throws for maximum accuracy on those hard-to-reach midrange lines.

(N)eutron (P)roton (E)clipse

Neutral-Stable

13mm Midrange Driver

Axis

Great glide and tight line-holding accuracy has made the Axis a standby in MVP bags. While its classic design can be thrown with ease by newer players, it can also accept high-power throws for maximum accuracy on those distant approach shots.

(N)eutron (P)roton (E)clipse

Overstable

12mm Midrange Driver

Tensor

The Tensor will exhibit reliable high-speed stability for power throwers and is great for approach shots on windy days. The Tensor has outstanding glide coupled with its great high-speed stability, always followed by a dependable fade.

(N)eutron

Stable-Understable

12mm Midrange Driver

Tangent

Low power throwers will find this disc to be great for easy neutral lines and effortless glide. The Tangent features a smooth profile that offers a sleek modern feel, and will fit your hand like a glove.

(N)eutron (P)roton (E)clipse

PLASMA

Ion

Stable-Overstable
11mm Putt & Approach

The Ion's beaded rim design makes it a straight to overstable flier. Power putters can use the Ion with confidence. It is capable of holding long powerful lines with a late subtle fade. This makes it a very versatile putter that can be used in all conditions..

Neutron Proton Eclipse
Electron PLASMA

Anode

Neutral-Stable
11mm Putt & Approach

Clean putting releases and straight flights make the Anode our most accurate putter. Long smooth hyzer and anhyzer lines are made easy with the Anode as an approach disc. Great glide contributes to its ability to adapt to any putting style.

Neutron Proton Eclipse
PLASMA

Atom

Straight-Stable
10mm Putt & Approach

The Atom is a straight flyer with enormous potential off the tee and on long approaches. Right off the shelf, the Atom has a neutral stability with just a bit of fade. Over time the Atom will wear in to an extremely straight and floaty putter. The Atom combines Electron baseline putter plastic with the extended flight phases of GYRO™ Overmold Technology, producing a tactile and controllable go-to putter.

Electron

Straight-Stable
Mini Disc

Nano

The Nano is a mini disc suitable for playing mini disc golf or as a marker in competitive disc golf. It bears the same premium quality, aesthetics, and high production standards as our golf discs in half the diameter. Mark your lie in style, and reinforce that all-important confidence in your plastic. For those who enjoy throwing mini discs, the Nano has a versatile straight-stable flight that can be used for low-power indoor throws as well as high-power outdoor throws. The Nano is a must-have for every MVP thrower.

(N)eutron (P)roton (E)clipse
PLASMA

Straight-Stable
Mini Disc

Icon

The Icon's wing is designed to fly slightly more understable than the MVP Nano mini disc. The Icon is perfect for indoor play, mini games, and of course marking your lie with style.

(N)eutron (P)roton

Metal Mini Discs

Introducing the MVP & Axiom Metal Mini Drivers and Micro Mini Drivers, perfect as collector pieces or as the go-to marker for your game. Available in six colors. Both sizes are machined from high quality aluminum into a sleek driver profile. Whether you like the heavy metal or a lighter model, there's a PDGA legal metal marker for you. Standard metal minis are 10.5cm in diameter and 100g. Micro Minis are 7cm in diameter (PDGA marker minimum) and just 30g.

Please note: Metal Minis are dangerous if thrown and are meant for display/marketing only

The MVP Circuit is a series of branded events introduced in 2015. We provide an easy to run “event in a box” featuring exciting new and exclusive merchandise at great wholesale prices and the supporting website to list events and help connect you with players. The event is designed to celebrate the MVP brand for our existing fan base and introduce new players to the brand with a mix of fun side games and competitive disc golf. Hosting an MVP Circuit Event at your local course brings revenue from entries and exclusive merchandise, and builds your repeat buyer base. Register a 2016 Circuit Event today!

PUTT & APPROACH

Axiom Discs models represent a system of complementary flight characteristics.

Although every thrower is unique, the relationships between models should remain constant for all users.

Rather than assign numeric values, we illustrate a spectrum of flights thrown flat from high to low power.

Trust your throwing style and angles to interpret these flight descriptions. Your results may vary.

Direction of Spin

Clockwise and counter-clockwise disc rotations produce opposite side-to-side movements and ending fade.

Clockwise
RHBH Right-Hand Backhand
LHFH Left-Hand Forehand

Counter-clockwise
LHBH Left-Hand Backhand
RHFH Right-Hand Forehand

This chart only shows Clockwise flights. Consider a mirror image result for most Counter-Clockwise flights.

Thrill

Overstable
21.5mm Distance Driver

The Thrill will be workably overstable for just about any arm, with strong resistance to turn even in strong headwinds. As a 21.5mm class GYRO™ driver, the Thrill is designed to hit a midpoint of stability between two MVP Disc Sports models, the Phase and Photon. The Thrill will debut in grippy opaque dual-color Neutron plastic, soon to be followed by dual-color candy Proton plastic.

Defy

Straight-Stable
21.5mm Distance Driver

The Defy will be straight for a wide range of players and situations. For tailwinds and lower powered players, the Defy's overstable nature will come out. For light headwinds and higher powered players, the Defy will fly some remarkably straight and s-curve lines. As a 21.5mm class GYRO™ driver, the Defy is designed to hit a midpoint of stability between two MVP Disc Sports models, the Photon and Wave. The Defy will debut in grippy opaque dual-color Neutron plastic, soon to be followed by dual-color candy Proton plastic.

Vanish

Understable
21.5mm Distance Driver

The Vanish will be straight to understable depending on the thrower and wind conditions. The Vanish's stability profile places it near a threshold of being straight at low power or in tailwinds, and controllably understable at high power or in mild headwinds. As a 21.5mm class GYRO™ driver, the Vanish is designed to hit a midpoint of stability between two MVP Disc Sports models, the Wave and Orbital. The Vanish will debut in grippy opaque dual-color Neutron plastic.

Overstable
20mm Fairway Driver

Fireball

The Fireball is overstable and wind-resistant like the MVP Motion, but has an overall straighter and longer flight profile. The Fireball has a longer forward push during its early stage of fade, where the Motion would have begun a long gradual fade. At the end of its flight the Fireball will drop later and more abruptly than the Motion.

(N)eutron (P)roton

Stable-Overstable
20mm Fairway Driver

Wrath

The Wrath is a more turn-resistant complement to the Insanity. Just as the Insanity mimics a broken-in Inertia, the Wrath brings a worn-in flavor to the beloved Tesla flight profile. Power throwers will find the Wrath able to turn on command to stretch out and shape distance lines, while average throwers will see a bit of resistance useful for headwinds and fading lines. The low-speed fade of the Wrath is enough to range your shot and rein in a turnover line

(N)eutron (P)roton

Neutral-Stable
20mm Fairway Driver

Insanity

The Insanity is the first of our 20mm Distance Driver class for Axiom Discs, complementing the MVP 20mm class. The Insanity is best described as a worn-in MVP Inertia, with slightly more high speed turn and a diminished fade. For average power throwers the Insanity will be remarkably straight, while high power throwers can execute precise flip and turnover lines with ease. Whether you're looking for that sweet-spot worn disc flight, or you're looking to achieve bigger Inertia lines with less power, give Insanity a shot.

(N)eutron (P)roton PLASMA

Understable
20mm Fairway Driver

Virus

The Virus is Axiom's easiest to throw distance driver, with a glide and responsive understability that keeps it in the air. Power throwers will be able to flex huge turnover shots with straight forward fade. Average throwers will be able to extend and shape lines using the Virus' turn and gentle fade.

(N)eutron (P)roton

Clash

Overstable
17mm Fairway Driver

The Clash is a unique line-shaping complement to the Crave, built to open up more lines on the fairway. Wherever the Crave is too straight, or doesn't fade enough, the Clash picks up and shines. High-power throws will activate a greater turning phase than Crave to shape lines; however at any power level the Clash will fade more than the Crave. This yields a responsive and rangeable fairway driver.

Crave

Stable-Overstable
17mm Fairway Driver

The Crave provides controllable straight flights with a great feel and loads of dual-color style. Relative to MVP drivers, the Crave is like a seasoned Servo. The popular "worn workhorse-stable" vibe is achieved with subtle wing contours that also feel great in the hand. The stability, range of weights, and easy throw make the Crave a GYRO™ rig staple.

Inspire

Neutral-Stable
17mm Fairway Driver

The Inspire is the second fairway driver from Axiom Discs, and is an understable complement to the breakout hit Crave. Skilled players will be able to get smooth straight and turnover/flip lines from the Inspire, while beginners and lower-powered throwers will gain distance and usability from its understable nature. Inspire is the easiest-to-throw GYRO™ driver.

Alias

Overstable
17mm Fairway Driver

The Alias is a straight-flying placement midrange similar to the popular Tangent, but with a bit more high-speed stability. This point-and-shoot midrange has the ability to lock into straight lines and hyzers, as well as pan out of high anhyzer shots and shallow helix lines. The Alias simply goes where it is sent.

Neutron Proton

Theory

Stable-Overstable
17mm Fairway Driver

The Theory is the perfect complement to the Alias. A flat release with moderate power will allow a gradual and predictable turn with great drift. Low power throwers can achieve very straight, neutral lines. Power throwers can also use this for consistent hyzerflips with an extended glide.

Neutron PLASMA

Envy

Stable-Overstable
10mm Putt & Approach

The Envy has a smooth modern feel that fits in the hand perfectly, lending confidence for both putt and approach duties. The Envy exhibits reliable high-speed stability and a minimal fade. With a slightly lower profile and cruising speed than the Ion and Anode class, the Envy is a uniquely "lid-like" stable putter.

Neutron + SOFT Proton PLASMA

Proxy

Straight-Stable
10mm Putt & Approach

The Proxy shares the Envy mold's core, lending the same low-profile feel and solid grip, along with a short wing width and wide flight plate diameter for superior glide. The Proxy sets itself apart from the Envy with a remarkably straight forward-fading finish. A bit of high-speed turn potential allows the Proxy's lines to be manipulated over a broad range of power, and helps less powerful throwers achieve straight putter drives.

Neutron + SOFT PLASMA

MVP Nucleus Tournament Bag

- Holds 18-22 discs (including 2 in front putter pocket)
- Black primary fabric with bold color accents (lime, pink, red, royal, or yellow)
- Attachments available for included shoulder strap, or for MVP Back Straps
- Rigid padded bottom
- Rigid and thickly padded walls
- 2 Insulated drink holders
- Screen printed accented MVP bar logo
- 2 Internal velcro dividers
- 4 Ball feet to keep off ground and extend the life of the bottom
- 2 Full size zippered side compartments
- 2 Quick access side pouches (great for a few minis, phone, keys, etc.)
- Adjustable shoulder strap included
- Pencil holder next to putter pocket
- Small utility pocket next to putter pocket
- Zippered pouch inside of the zippered side compartment
- High quality materials and craftsmanship
- Protected with a Limited Lifetime Warranty

MVP Beaker Competition Bag

- Holds 12-15 discs (including 1-2 discs in front putter pocket depending on disc depth)
- Bold color fabric (lime, pink, red, or royal blue) with black accents
- Attachments available for included shoulder strap, or for MVP Back Straps
- Rigid padded bottom
- Insulated drink holder
- Screen printed accented MVP bar logo
- 2 Internal velcro dividers
- 4 Ball feet to keep off ground and extend the life of the bottom
- 1 Full size zippered side compartment (fits 2 discs)
- 1 Quick access side pouch
- Side slit pouch for score card and mini
- Adjustable shoulder strap included
- High quality materials and craftsmanship
- Protected with a Limited Lifetime Warranty

MVP Cell Starter Bag

- Holds 12-15 discs (including 1-2 discs in front putter pocket depending on disc depth)
- Bold color fabric (lime, pink, red, or royal blue) with black accents
- Attachments available for included shoulder strap, or for MVP Back Straps
- Rigid padded bottom
- Insulated drink holder
- Screen printed accented MVP bar logo
- 2 Internal velcro dividers
- 4 Ball feet to keep off ground and extend the life of the vbottom
- 1 Full size zippered side compartment (fits 2 discs)
- 1 Quick access side pouch
- Side slit pouch for score card and mini
- Adjustable shoulder strap included
- High quality materials and craftsmanship
- Protected with a Limited Lifetime Warranty

MVP Voyager Backpack Bag

Introduction medium sized bag to the backpack series

- Up to 18 discs
- Upper compartment for storage
- 2 sides of zipper pockets
- Room for stool/ umbrella
- 4 Large and small drink holders
- Mini pocket
- Scorecard holder
- Custom MVP zipper pulls
- Foot Stabilizers
- Unique upper compartment
- Sharp inner corners for easy accessibility

BLACK HOLE

Portal

Permanent & Portable

The Black Hole™ Portal is our upcoming course-quality flagship basket

- Championship level approved
- Available in both Portable and Permanent configurations
- Seamless Matte Black color
Galvanized first stage followed by tough powder coated outer shell for extra durability and protection
- The first course basket on the market to feature 30 strands of stainless steel chain for high visibility and extra longevity on the course
- Three symmetrically spaced complete tiers of chain
- Built to standard PDGA height and size regulation
- Sturdy all metal construction, all joints welded
- Compact easily transportable disassembled unit
- Comes with the tools and hardware for assembly
- 2.5" tall header band - 26.5" cage diameter
23" outer chain tier diameter, 15.5" inner chain tier diameter, 9" inner chain tier

Pro

The Black Hole™ Pro is designed for the most realistic putting experience off the course.

- Seamless Matte Black color
Electrophoresed first stage followed with tough powder coated outer shell for extra durability and protection
- 24 high visibility zinc coated heavy duty course weighted chains
- 12 outer and 12 inner chains equidistantly oriented for zero weak pockets - reducing cut throughs and pole bounces
- Built to standard PDGA height and size regulation
- Sturdy all metal construction, all joints welded
- Uniquely engineered design - assembles or disassembles in under 1 minute
- Compact easily transportable disassembled unit
- Threaded tension connections for a sturdy assembly without any distracting wobble or play
- Standard load distributed base
- 2" tall header band - 25.5" regulation diameter
- 21" outer chain tier diameter, 15" inner chain tier diameter

The Black Hole™ Baskets are a series of disc golf baskets from MVP Disc Sports, the Black Hole™ Pro, Black Hole™ Precision, Black Hole™ Practice and coming in 2016, the Black Hole™ Portal Course Basket and Black Hole™ Mini Disc Basket. These baskets are designed by MVP and manufactured to the highest quality and customer value.

Retailers may drop ship any of the Black Hole™ baskets directly to disc golfers from MVP Distribution Headquarters at no extra charge, keeping overall prices lower any application.

Precision

The Black Hole™ Precision is designed to hone your putting routine with unforgiving precision.

- Seamless Matte Black color Electroplated first stage followed with tough powder coated outer shell for extra durability and protection
- 12 high visibility zinc coated heavy duty course weighted chains
- Built to standard PDGA height and size regulation
- Sturdy all metal construction, all joints welded
- Uniquely engineered design - assembles or disassembles in under 1 minute.
- Compact easily transportable disassembled unit

MVP Colors: Black, Navy

Axiom Colors: Red

MVP Tri-Lit LED

Introducing the new and improved Tri-Lit LED Lights by MVP Disc Sports. These familiar micro LED units are designed to be taped to the center of a disc for night play, but can be used in a variety of creative ways. A button located between the three lights under the printed MVP logo circuit cover switches power on/off. This Multicolor model auto-cycles beautifully through a range of vibrant color and flash modes using blends of its three LED lights.

Adhesive not included — users are advised not to remove the printed circuit cover, and we recommend using heavy-duty strapping or duct tape to secure the unit to the disc.

MVP & Axiom Towels

In our pursuit for premium products and accessories, we've upgraded our towels to a new plush and absorbent material. These high quality golf towels have embroidered logos and attached bag clips.

Hive "The Claw" Disc Retriever

The Claw from Hive Disc Golf is an improved underwater disc retriever that does double the disc catching and a fraction of the soil disruption. Four claw-like prongs do all the work of snagging your sunken disc above or below the Claw, while its center bar combs above the soil rather than unnecessarily dredging up the full width into a cloudy-watered mess. Comes with long string and a ring on the end to prevent slip-outs when tossing into the water.

MVP & Axiom Vinyl Stickers

High grade vinyl window decals for any use. Represent MVP and Axiom wherever you go. Available in white vinyl only.

MVP Product Display Rack System

We've engineered the MVP Retail Display Rack to look great and do a better job of helping your buyers shop for plastic. Our Easy Access style of arranging discs horizontally takes up less space and allows shoppers to quickly see and grab ANY disc off the rack.

The MVP Retail Display Rack will be FREE with any wholesale order of 300 or more discs. On your order of 300 or more discs, you must enter a quantity of 1 into the order form field for Retail Display Racks, and the wholesale cost of the rack will be credited in your order total.

Free with 300-disc orders

- A. MVP "Plastics Technology" Banner- 2'x6'
- B. Axiom "Renaissance" Banner- 2'x6'
- C. MVP Banner- 2'x6'
- D. MVP "Electrify" Banner -2'x4'
- E. Axiom "Geometry" Banner 2'x4'

A full lineup of banners featuring MVP & Axiom Discs brands. Perfect for any shop or superfan! Featuring new Plastics Technology, Axiom Renaissance banners.

Posters

\$19.95

MVP and Axiom Flight System Posters 12" x 24" Lineup

The flight charts developed by MVP show players of all skill levels how a disc may fly for them before they try it, leading to more informed and satisfied customers. Both posters include our "Easy Select" suggestions for each disc class, for the best recommendation for GYRO™ initiates.

Feather Flags

Perfect for indoor/outdoor use for shops and events. Low cost and nice margin for retail sales to fans!
